

# blue eye Integration with Eagle Eye Networks

**Blue Eye** is pleased to offer a strategic integration with our partners at Eagle Eye Networks (EEN). This integration enhances the capabilities of our platform and reinforces our position as the industry-leading remote video monitoring provider.

## Integration Benefits

- **Unified Hardware Utilization:** By using existing EEN hardware, we eliminate the need to install additional servers on our end-customer's network. This supports our principle that customers should not need to replace existing equipment to benefit from superior monitoring services.
- **Rapid Deployment:** Our setup process is expedited because it no longer requires the shipping and installation of new hardware. This allows us to quickly transition sites to evaluation and configuration.
- **Simplified Setup Process:** Utilizing the EEN VMS reduces the complexity of setup. There is no need for our end-customer's IT manager to find and provide credentials for each camera. Compatibility with EEN ensures seamless integration with our service.

## How it Works

## About Eagle Eye Networks

Eagle Eye Networks' platform enables remote access to live and recorded video, enhancing security and efficiency. They incorporate advanced analytics and AI for actionable insights and automated processes. With a focus on reliability and innovation, Eagle Eye Networks facilitates seamless video monitoring and management for diverse applications.
